SUMMARY

Computer Science student and former Data Analyst Intern who builds working software for real problems, from a Rust/WebAssembly sandbox and key-value store to a hand-gesture control app, an AI contract analyser and Unity games. Quick to learn and focused on clean, tested, well-documented code.

EDUCATION

Bachelor of Technology in Computer Science and Engineering *2023 - 2027*
St. Andrews Institute of Technology & Management (SAITM), Gurgaon, Haryana (MDU, Rohtak)
CGPA: 6.38 (current)

EXPERIENCE

Data Analyst Intern | QAwD *Jan 2026 - Jun 2026*

- Cleaned and validated **50,000+ production data records**, improving data accuracy and consistency.
- Processed and analysed large datasets with Python and SQL, applying data cleaning and feature engineering.
- Identified and resolved data quality issues to support reliable reporting and analysis.

PROJECTS

CodeCage - Secure WebAssembly Plugin Sandbox | Wasmtime, WASI, GitHub Actions github.com/Deepanshu16125/codecage

- Built a Rust host on Wasmtime that runs untrusted WebAssembly plugins with **no file, env or network access** by default.
- Enforced CPU (fuel), memory, timeout and output limits through per-plugin TOML policies, SHA-256 hash pinning and an audit log, with a live HTML/JS dashboard.
- Tested against **14 Rust and C plugins**, including **10 attacks, all contained**; **26 automated tests** and **19/19 scenarios** pass in GitHub Actions CI on Windows and Linux.

ClearClause - AI Legal Contract Analyser | Tailwind CSS, OpenAI API github.com/Deepanshu16125/clearclause-backend

- Built a full-stack app: a **Next.js (React/TypeScript)** frontend with Tailwind CSS talking to a **FastAPI** REST backend that parses contract PDFs up to **15 MB** with PyMuPDF and PyPDF2.
- Integrated **gpt-4o-mini** with JSON-mode structured prompts to return a contract summary, a **0-100 Fairness Score** and per-clause HIGH / MEDIUM / LOW risk ratings.
- Generated plain-English explanations and negotiation suggestions from legal clauses, shown in a risk dashboard.

GestureOS - Hand-Gesture Control | MediaPipe, WebSockets github.com/Deepanshu16125/GestureOS

- Developed on-device MediaPipe hand tracking with a **One Euro filter** and pinch hysteresis for Air Mouse, Air Draw, Slides and ASL letters.
- Wrote an optional **Python WebSocket bridge** that drives the real OS mouse, with a watchdog, kill switch and allowlists.

WiscLite - Key-Value Store (WiscKey design) | WebAssembly github.com/Deepanshu16125/WiscLite

- Implemented a Rust LSM-tree key-value store that separates keys from values: WAL, SSTables with Bloom filters, compaction and value-log GC.
- Measured **1.16x** write amplification vs **4.55x** for an inline-value LSM baseline over 500k puts; compiled the engine to **WebAssembly** to run in the browser.

Burnout Rush - Arcade Racing Game | Unity, C# github.com/Deepanshu16125/Burnout-Rush

- Designed and built a Unity racing game with 5 tracks, AI opponents, split-screen 2-player mode and a playable Windows build.

SKILLS

Languages: Rust, Python, TypeScript, JavaScript, C, C++, C#, SQL
Frameworks & Tools: React.js, Next.js, FastAPI, Unity, MySQL, Git

ACHIEVEMENTS & EXTRA-CURRICULAR

Achievement: 3rd place at Innoviz, college innovation event (piezoelectric energy system).
Event Coordination (Aug 2024 - May 2026): helped organise Deepotsav 2025, Cultural Fest 2026, Convocation 2026, Zeal 2026.

CERTIFICATES

Web Development (Coding Blocks); Java Programming (Kreativan Technologies); Big Data (Samsung Innovation Campus).
